Data Quality Manager

Increase the quality of your data in the company and keep it at a high level in the long term.

Description

Problem / Challenge:

Huge amounts of data from various data sources make it very difficult to check the quality of the information easily and without spending a lot of time.

Incomplete or incorrect data leads to e.g. approval processes and provisioning processes running incorrectly, resulting in a high loss of information and, above all, time.

In order to be able to take and initiate the right actions based on reports, dashboards and analyses, complete and correct data is essential.

Data Quality Manager

Solution:

With the Data Quality Manager we reach a very important **goal** – to **increase** the **quality of the data** in your company and above all to keep it at a **high level in the long term** !

Added values summarized at a glance:

- Incorrect or incomplete data are transparently highlighted with one click. No more individual, long and time-consuming searches.
- Direct drill-down to the affected object and thus immediate update of the object possible.
- Complete integration of the app in the "Matrix42 UUX UI".
- Over 50 practice-related queries delivered with the app
- Any number of additional queries can be configured independently by you at any time

- Copy existing queries via action possible
- For each query, you can configure whether an additional task should be created. In this way, you **proactively ensure** that **someone actively takes care of correcting the incorrect or incomplete data**.
- A predefined report as well as predefined, module-specific dashboards are included. These are integrated directly into the Matrix42 interface.
- Fully automated installation of the app via a ready-made Matrix42 configuration package or via the Matrix42 Marketplace Extension Gallery. App can be used immediately afterwards!
