# Garbage Collector

Schedule automatic deletion of objects that match a configured pattern.

## Description

### Garbage Collector for [Matrix42 Workspace Management](#)

The engine **Garbage Collector** is a cyclicly running background service that deletes objects (e.g. Computers, Monitors and Incidents) based on user-defined deletion criteria. The list of objects to be deleted is determined dynamically via a configuration file. For example, a filter can be defined to delete all computers with the status 'inactive' or to delete all incidents which are older than 1 year.

Schedule all deletion processes by various attributes.

Advantages are:

- Runs cyclic in the background
- Continuous clean up of database
- Very helpful in the context of bulk operations
- Filter configuration with ASQL
- Reduced database size

For more automated data deletion also check [CleanDatabase](#).

## Additional information

<b>Platform</b>	Digital Workspace Platform (DWP)
<b>Digital Workspace Platform (DWP) Compatibility</b>	7.2, 8.0, 8.1, 9.0, 9.1
