WinPE Extension Pack – Premium Edition

The innomea WinPE Extension Pack consists of WinPE PreOs Packages containing many functional extensions to the delivered PreOS Packages: These Extensions are named: **ComputerNameValidator**, **HardwareProfileValidator**, **CommonDrivers**, **ListWinPEVariables** and **PostWindowsInstallation**

Description

The innomea WinPE Extension Pack consists of WinPE PreOs Packages containing many functional extensions to the delivered PreOS Packages.

- **ComputerNameValidator**
- **CommonDrivers**
- **HardwareProfileValidator**
- **ListWinPEVariables**
- **PostWindowsInstallation**

The both "Validator" packages will ensure a higher quality of Windows Installations send to the customers and users, set up with Empirum WinPE OS-Installer!

The **ComputerNameValidator** ensures that only Windows Installations will proceed where the Computername meets the requirements defined by the administrator. If the requirements where not met, the Windows Installation will stop and an Error Message will be shown in the SWDepot and PXE-Log.

The **HardwareProfileValidator** ensures that only Windows Installations will proceed where the Computer-Model is known by the Empirum System. By default, if the Matrix42 DriverIntegration package will not find a valid or associated Model or Driver, the Windows Installation continues. This will lead to incomplete Windows Installations. Because there is no striking error or warning message, no one will have a focus on that.

Both "Validator" packages can be configured to bypass the validation for exceptions.

The **CommonDrivers** PreOS Package is intended to copy drivers or other files for all

hardware models. The idea is, to copy e.g. docking station drivers for all models.

ListWinPEVariables documents the variables used to install a computer with Empirum WinPE OS-Installer.

PostWindowsInstallation brings back some functionality from the "former known" OS Templates, also voted in the Matrix42 Ideas Portal. Build in functions: Renaming the owner and company of the Windows Installation, Renaming the Label of Drive C:, modifying the firewall settings, Enabling TerminalServices, using a static KMS-Server, executing driver installations using EXE oder MSI files, show the installed Windows Edition in PXE-Log.

All packages are controlled by various variables and can be used additionally to the vendor packages.

The "Premium" Edition contains support via E-Mail, Phone, etc. with guaranteed reaction and service times.
