QBarCode

Allows you to create customizable Barcodes or QrCodes. This extension can be used in your preview dialogue.

Description

QBarCode

allows you to generate and show QrCode or Barcode (Code 128 type) directly on the preview selecting the data to be used for the generation (Asset name, Asset Serial Number, or you can use it for Ticket Number etc.) from the data model.

QBarCode is a control descriptor, you will need to select just the data you want to generate. It will not store any data but it will generate the QrCode or Barcode for displaying purposes only.

Features

- Generate QrCodes
- Generate Barcodes (Code 128 type)
- Customize Colors to fit your theme

QrCode

- Appearance

    - Width of the QrCode
    - Height of the QrCode
    - Background Color
    - Foreground Color

Barcode

- Show or not the label text under the barcode
- Appearance

    - Text and Bars Color
