EgoSecure Encryption Specialist - Training

Get to know the basics of EgoSecure cryptology.

Description

Learning Objectives

You will receive practice-oriented training courses, which deepen specific topics concerning data protection.

The participants of the training simulate the role of the administrator after comprehensive introductions to the IT security measures, and configure specially installed computer systems. This gives you a practical insight into the methods and tools of Data Protection. Practical and theoretical units increase the handling of EgoSecure protection measures and the awareness of safety risks.

Participants will learn about EgoSecure Data Protection. This allows you to optimally adapt the security to the needs and conditions of the company. Through practice-relevant examples and exercises in small groups it is taught how to integrate the components with few steps and fully exploit the possibilities of EgoSecure Data Protection.

Target Audience

You are a system and network administrator, responsible for your company's IT system or a IT security officer.

Topics

Third day: EgoSecure Encryption Specialist

Data encryption is one of the most important IT security measures. In this training the participants learn the basics of the cryptology of EgoSecure.
