Matrix42 Endpoint Security Prevention SaaS - per User

In order to not only detect data loss (unintentional) but also detect data leakage like theft or manipulation (intentional) and take proactive prevention measures, Matrix42 Endpoint Security Prevention offers comprehensive analysis and automation functionality. * Minimum order quantity for Matrix42 SaaS solutions is 100 licenses.

Description

Matrix42 Endpoint Security Prevention SaaS Components

- Access Control
- Application Control
- Secure Audit
- Removable Device Encryption
- Local Folder Encryption
- Cloud Encryption
- Network Share Encryption
- Permanent Encryption
- Insight Analysis
- IntellAct Automation

In order to not only detect data loss (unintentional) but also detect data leakage like theft or manipulation (intentional) and take proactive prevention measures, Matrix42 Endpoint Security Prevention offers comprehensive analysis and automation functionality. This includes Insight Analysis, which monitors all proactive protective measures, thus ensuring that they are optimally designed. The IntellAct module represents the automation engine allowing rule-based workflows that trigger dedicated security actions to protect data. It also features modules controlling access to data

gateways on the endpoint, controlling application execution, checking all data transfers and application executions on the endpoint, as well as data encryption.

Files are being encrypted with configurable algorithms like AES 256 Bit or Blowfish 448 Bit whenever you copy a file from your local endpoint to an unsecure location and decrypted 'automagically' without the customer having to do anything if the agent is installed on the device.

If customers want to access the encrypted data from an unmanaged device, it can be decrypted by entering a password via a little app that is copied with the encrypted files automatically. This behaviour can be configured very granular to ensure that certain files can't be encrypted for example on unmanaged endpoints at all.

To especially protect the data on your mobile devices in case of theft or loss, the Full Disk Encryption in combination with the Preboot Authentication makes everything on the endpoint's hard drive unusable and even unbootable if you can't login right after the boot of the device is initiated.

This hosting option includes the provision of Matrix42 solutions in an ISO/IEC 27001 certified Microsoft Azure Datacenter in the Netherlands. Additionally it complies with the requirements of ISO/IEC 27017 and ISO/IEC 27018. Your important workloads are managed in a secured and isolated cloud. Hosting regions in Europe also meet EU compliance requirements. This offer is valid for organizations in the EU and EFTA only.

Additional information

License metric	Per User
Manufacturer	Matrix42 AG
Contract type	Subscription
