

AD Catalogue Management

The ITSM Add-on transfers existing authorisation groups, including their description, from the Active Directory into the Matrix42 system and auto identify already provisioned security rights to documentate it to the system.

Description

The ITSM Add-on transfers existing authorisation groups, including their description, from the Active Directory into the Matrix42 system.

A corresponding catalogue item is automatically created in the Matrix42 system for each transferred authorisation group. These catalogue items can then be booked as a service.

Already provisioned security rights will rebooked via auto-demand-detection.

Advantages:

- Decision-makers can obtain group authorisations via the Matrix42 system
- Automaticly filled demand-detection for already provisioned security rights
- Obtained authorisations are documented in the Matrix42 system
- Automation relieves the burden on IT
- Order initiation for an authorisation, including approval and provisioning, takes place in one process

Technical requirements:

- Matrix42 Enterprise Service Management (standard

supported versions)

Installation:

[Install Extension - Installation and Configuration](#)
